Maximum Strength and Clinically Proven Chondroitin Sulfate*

Includes Curcumin for Additional Joint Health Benefits*

Supports Healthy Joint Function and Cartilage*

Prevents Good Health of Body Joints, Especially in the Knees and Hips*

Chondroitin Sulfate is a proteoglycan that is found naturally in the body and is a major component of the connective tissue that cushions joints. It has been known to help reduce joint pain and can even improve joint mobility properties. InvigoFlex[®] PM provides a quality maximum strength Chondroitin Sulfate ingredient that has clinically proven to increase stiffness.*

Curcumin is an important white bioactive compound that is part of the ginger family. It has a long history of use to address many chronic health conditions, including supporting joint health. Curcumin has been known to enhance antioxidant properties. InvigoFlex[®] PM contains a patented form of Curcumin, known as the Curcumin Phos, and is clinically proven to increase stiffness.*

InvigoFlex® AMPM is a unique day & night joint supplement geared to provide you with 24-hour joint support by giving you the right ingredients at the right time. **InvigoFlex® AMPM** not only contains Glucosamine Sulfate and Chondroitin Sulfate, but also other natural ingredients. Boswellia Serrata and Curcumin (Turmeric) are offered in combination with Glucosamine Sulfate and Chondroitin Sulfate to help with overall joint health.*

However, **InvigoFlex® AMPM** is not your typical Glucosamine and Chondroitin product. While others combine both Glucosamine and Chondroitin within the same formulation, we developed a schedule that allows both ingredients to be taken together - but not combined - keeping both ingredients at full bioavailability.*

1. How does InvigoFlex® AMPM work?

As it is in life, timing is everything. This is why **InvigoFlex® AMPM** has a specific schedule intended to allow our combination of ingredients to work in harmony with one another. Only our innovative schedule captures the full effect of Glucosamine Sulfate and Chondroitin Sulfate, a key component which allows for a more complete product. Take our four (4) caplets a day, two (2) in the morning - AM and two (2) in the evening - PM, and your joints will be supported all day long. The morning dose of Glucosamine Sulfate supports your cartilage and maintains joint health throughout the early part of the day. Just when the Glucosamine Sulfate begins to wear off, you take Chondroitin Sulfate in the evening (10 to 12 hours later) to provide another layer of support after a long day on your joints. At no point during your day are you without the support of **InvigoFlex® AMPM**.*

2. Does InvigoFlex® AMPM work right away?

It is highly recommended that **InvigoFlex® AMPM** be taken for a minimum of three months. While some customers may feel results as soon as 1-2 weeks, optimal effect can be seen after 12 weeks of daily administration. Results may vary depending on the customer's individual medical history.*

3. Who should take InvigoFlex® AMPM?

InvigoFlex® AMPM should be taken by anyone who is suffering from medium to high joint discomfort. As the aging process breaks down the cartilage in your joints, keeping up with an active lifestyle becomes increasingly difficult. Sports and exercise that once came easy might suddenly become too much for your aching joints. If you are one of these people, then **InvigoFlex® AMPM** is right for you.*

4. What makes InvigoFlex® AMPM different than other joint supplements?

InvigoFlex® AMPM is not your typical Glucosamine/Chondroitin combination product. **InvigoFlex® AMPM** contains a revolutionary schedule which was made to specifically allow both Glucosamine Sulfate and Chondroitin Sulfate ingredients to be taken together, but separately, respecting each other's bio-availability. No other products can offer the same delivery system with our unique ingredients. The effectiveness of Glucosamine and Chondroitin supplements depends heavily on the dosing, quality, and even timing of the ingredients. This is why we not only separate Glucosamine and Chondroitin, but also provide you with quality ingredients. Our Glucosamine Sulfate is patented, premium-quality, and USP-grade (United States Pharmacopoeia) while our Chondroitin Sulfate is a European pharmaceutical grade Chondroitin Sulfate with Max Purity levels of 95% - 105%.*

5. Why is it so important to split the dosages of Glucosamine and Chondroitin?

The big problem with most joint products on the market today is that they combine Glucosamine and Chondroitin formulation into the same caplet. While in theory, it would seem such products would produce superior results due to its ability to offer two key ingredients; however, the success of Glucosamine and Chondroitin supplements depends heavily on the dosing, quality, and even timing of the ingredients. Research has shown that when combined, both Glucosamine and

Chondroitin fight each other, lowering each other's bio-availability. It is for this reason, **InvigoFlex® AMPM** separates Glucosamine Sulfate and Chondroitin Sulfate into different caplets.*

6. What makes InvigoFlex® AMPM different than InvigoFlex® GS and InvigoFlex® CS?

InvigoFlex® is a full line of joint health products geared to provide customers quality options when choosing the best product for their individual needs. **InvigoFlex® GS** is a standalone Glucosamine Sulfate with Boswellia Serrata which is geared for people who have joint discomfort primarily in the knees. However, secondary benefits can be felt in body joints overall. **InvigoFlex® CS** is a standalone Chondroitin Sulfate with Curcumin that is geared for people who have joint discomfort not only in the knee, but also in the hands. **InvigoFlex® AMPM** is the total package, offering 24 hour joint support for those experiencing medium to high joint discomfort.*

7. Is InvigoFlex® AMPM proven to work?

Both Glucosamine Sulfate and Chondroitin Sulfate have been studied for their ability to modify underlying cartilaginous degeneration in joints, and therefore, to potentially provide relief to people who need it most. The majority of studies have demonstrated the ability of Glucosamine Sulfate and Chondroitin Sulfate to help alleviate symptoms of joint discomfort due to overexertion and exercise. However, the effectiveness of Glucosamine and Chondroitin combination supplements depends heavily on the dosing, quality, and even timing of the ingredients. Because of this, **InvigoFlex® AMPM** separates the dosage of Glucosamine Sulfate and Chondroitin Sulfate into separate caplets.*
