

InvigoFlex® D is a joint supplement product especially formulated to provide you with a premium-quality and maximum strength Glucosamine Sulfate. Joint supplements today vary in quality, ingredient type, and even in dosages. With InvigoFlex® D, we set out to create a product that customers could trust for superior quality and efficacy. It is for this reason InvigoFlex® D uses 1500mg of the CLASSIC Glucosamine Sulfate.*

1. How does InvigoFlex® D work?

As the aging process breaks down the cartilage in your joints, keeping up with an active lifestyle becomes increasingly difficult. Sports and exercise that once came easy might suddenly become too much for your aching joints. Repeated stress on your joints, whether it be from physical activities or from normal progression as we get older, can have negative effects on your cartilage. InvigoFlex® D works by supporting joint function and cartilage and promoting overall good health of body joints, especially in the knees.*

2. Why haven't I heard of InvigoFlex® D?

While you may not have heard about the name InvigoFlex® D, you may have heard about Glucosamine. Many products offer different types of Glucosamine (i.e. Glucosamine Hydrochloride) and provide different quality levels, and different dosages. With InvigoFlex® D, we purposely use Glucosamine Sulfate with a specific dosage and stability standards to ensure maximum strengths.

3. Who should take InvigoFlex® D?

InvigoFlex® D should be taken by anyone who is looking to promote and maintain overall joint health. This can apply to the most active customers who are engaged in weekly physical activities, to individuals who are worried about their natural joint progression. InvigoFlex® D not only helps customers who are currently feeling joint discomfort, but also those who would like to maintain their joint health. InvigoFlex® D can satisfy both customer's short-term and long-term needs for the overall well-being of their joints.

4. Is InvigoFlex® D proven to work?

Glucosamine Sulfate has been studied for its ability to modify underlying cartilaginous degeneration in joints, and therefore,

to potentially provide relief to customers. The majority of studies have demonstrated the ability of Glucosamine Sulfate to alleviate symptoms of joint discomfort due to overexertion and exercise.

5. Does InvigoFlex® D work right away? How long should I try it for?

It is highly recommended that InvigoFlex® D be taken for a minimum of 3 months. While some customers may feel results as soon as 1-2 weeks, optimal effect can be seen after 12 weeks of daily administration. Results may vary depending on the customer's individual medical history.

6. How safe is InvigoFlex® D?

InvigoFlex® D is safe with very minimal to no side effects reported. However, we recommend consulting with your physician so that they can better advise you on how InvigoFlex® D fits in with your individual medical history. If you are pregnant or breastfeeding, or on a blood thinner, ask your Doctor before taking.

7. What makes InvigoFlex® D different than other joint supplements?

While many products today use different versions of Glucosamine, such as Glucosamine Hydrochloride, InvigoFlex® D specifically uses Glucosamine Sulfate on purpose, with a specific dosage requirement of 1500mg per serving and a stabilization process using Sodium Chloride vs. Potassium (which most in the market use). Glucosamine Sulfate is one of the most effective and proven ingredients used to treat joint discomfort. A natural ingredient, Glucosamine Sulfate is essential in maintaining cartilage in the joints while defending, strengthening, and promoting overall joint health. InvigoFlex® D strives to offer the best version of Glucosamine Sulfate possible.

In addition, unlike other brands, we offer both a powder or caplet version of InvigoFlex® D to provide options for those who struggle with caplets.

8. Why do you offer a powder version and is it better than the caplet version?

InvigoFlex® D offers a powder version mainly to give

customers who struggle with taking caplets an option. In addition, our doctors who recommend our brands were looking for a powder version to offer, mainly because early studies done on Glucosamine Sulfate used a powder form. However, both powder and caplets are the same and offer the same benefits.

9. How does InvigoFlex® D compare to the other InvigoFlex products?

The InvigoFlex® brand offers customers options to align with their specific joint health needs. This means, if you are allergic to shellfish or looking for a specific product for your hand joints (InvigoFlex® GS) or a 24-hour solution (InvigoFlex® AMPM) you can find these options with InvigoFlex®. InvigoFlex® D offers customers the CLASSIC formulation with maximum strength Glucosamine Sulfate for your joints.

10. If I am allergic to Shellfish, can I take InvigoFlex® D?

Since, InvigoFlex® D is derived from shellfish, we would advise not to. Instead, we would encourage you to look at the InvigoFlex® GS which offers a shellfish free, sodium free, and vegetarian safe Glucosamine Sulfate.

11. Is InvigoFlex® D Gluten and GMO Free?

Yes, InvigoFlex® D is Gluten Free and GMO Free.

12. What is the recommended dosage?

The recommended dosage for InvigoFlex® D is 1500mg split between two caplets (which need to be taken together). If you are taking the powder version, it is one packet daily. Take the serving together with water, preferably with food, in the morning every day.
